Pro Tools® | Eleven® Rack is a revolutionary guitar recording system designed to solve the challenges guitarists have faced in the studio. Say goodbye to the lackluster guitar amp “models” of yesteryear: Eleven Rack utilizes a unique tone cloning design and one-of-a-kind, custom-designed True-Z input to re-create the experience of playing through a mic’d amp. By combining industry-standard Pro Tools | Software with a DSP-accelerated high-resolution interface, Eleven Rack puts professional recording into the hands of every guitar player. Whether you’re tracking in the studio or playing on stage, Eleven Rack delivers fresh, mind-blowing, hyper-realistic guitar amp and effects tones that will inspire your best performances.

Eleven Rack in the studio
Eleven Rack tightly integrates Pro Tools | Software with a high-resolution, dual DSP-powered audio interface, so you’ll never have to worry about latency when recording with its built-in amp/effects tones—nor will your computer have to carry the processing burden. Eleven Rack also takes re-amping to the next level by recording both dry and processed guitar signals simultaneously, allowing you to re-amplify later without patching a single cable. And because Eleven Rack amp and effects settings are embedded into the audio tracks you record, you can automatically recall those settings from your audio files on any Pro Tools system with Eleven Rack.

Eleven Rack on stage
Eleven Rack also rocks onstage as a standalone amp tone and effects signal processor—we pulled out all the stops to make sure it sounds and feels just like playing through the real deal. We also included a classic collection of effects, from must-have stompboxes to world-class rackmount studio processors. Eleven Rack has all the I/O flexibility you need to integrate it into your existing rig, and easily incorporate the tones you’ve recorded with into your live setup, closing the gap between studio and stage. Eleven Rack also offers incredibly powerful control options using affordable MIDI controllers and expression pedals, giving you full foot control over everything from vintage wah effects to tempo-driven delays and more.
